

Hydraulic and Pneumatic Connectors

KKSP Precision Machining LLC has long been involved with both of these large industrial markets.

The connector market remains extremely competitive & continues to search for ways to reduce costs.

In step with many hydraulic and pneumatic OEM's who have grown with continued improvements in the sectors of construction, rail, aerospace, and oil and gas exploration, KKSP has the added capacity to supply this market with well over 400 machines available at 4 locations in the Midwestern US and Mexico.

KKSP can help with our customer focus, world class quality, and delivery performance derived from a concerted and deliberate effort to continuously improve. Last month, thanks largely to the dedicated efforts of all our team members at all our divisions, KKSP achieved the best overall company-wide quality and delivery performance ever in the company's entire 42 year history! Ultimately this performance provides excellent reliability and lowest total cost for our customers.

Shear volume, business size, and multiple manufacturing locations are clear "stand out" strengths for KKSP. These key factors not only enable us to secure the best possible raw material prices but also allows us to be able to guarantee sustained production and offers a contingency for potential disasters. We operate extensive training programs such as our machine technician apprenticeship program, in which we currently have 20 people enrolled to guarantee our ability to keep up with future demand.

Let KKSP help you with your turned product needs. We are the experts at the manufacture of medium complex, high-volume screw machine components with sizes from very small to 3 1/2 inches in diameter made of brass, steel, stainless and aluminum.
