

## *Metal Inserts from KKSP Precision Machining LLC*

- Torque Limiters
- Compression Limiters
- Inlet Manifolds
- Electrical Standoffs
- Appliances
- Furniture

KKSP Precision Machining LLC supplies tens of millions of inserts for use in plastic injection molding applications across a wide range of customers and end markets including Automotive, Appliance, and Rigid Packaging.

With over 400 machines across four Divisions in the U.S. and Mexico, KKSP is the largest machining company of our kind. Our particular capabilities in threaded inserts have been honed through decades of experience in the market and our past and ongoing investments in equipment, facilities, and people.

KKSP's Quality First strategy begins with our TS 16949 and ISO 14001 framework and is driven deeply into each Division through our processes, procedures, and continuous improvement culture all oriented to exceed customer expectations. In addition to our process control focus, we also maintain a department of high-speed, proprietary inspection equipment. These fully-automated machines offer 100% inspection of numerous attributes at very high rates of throughput so we are able to provide an added measure of quality assurance to our metal insert customers for whom one bad part per million is one too many!

*If your injection molded assembly calls for brass, aluminum alloy or free machined steel inserts, think of KKSP as the source you can trust to deliver your high volume needs consistently, on-time, and at a competitive price.*
